A
Concentration drives the gap
bias $(\hat{h}^2 - h^2)$
0.00
−0.05
−0.10
GCTA
CHEWS
HEELS
equal magnitude
normal
heavy tailed
how the fixed total effect is spread
B
The one place GCTA breaks
bias $(\hat{h}^2 - h^2)$
0.05
0.00
−0.05
common causal (MAF 0.05-0.5)
rare causal (MAF 0.01-0.05)
frequency of the causal variants
