Effect of each experimental change, relative to the baseline
A
How each change moves the bias
n = 100 · below baseline (n = 300)
n = 300 · baseline
n = 500 · above baseline (n = 300)
n = 800 · above baseline (n = 300)
n = 1,000 · above baseline (n = 300)
equal-magnitude effects · most spread out
normal effects · baseline
heavy-tailed effects · most concentrated
common causal SNPs · MAF 0.05-0.5
rare causal SNPs · MAF 0.01-0.05
high-LD regions · top decile
low-LD regions · bottom decile
GCTA
SuSiE
HEELS
left = more downward bias
