
Test-retest reliability — two disjoint halves of 287 donors (4,171 genes)
A
GCTA
r = 0.848
$\hat{h}^2$, other 287 donors
$\hat{h}^2$, donors 1-287
B
SuSiE
r = 0.892
$\hat{h}^2$, donors 1-287
C
HEELS
r = 0.855
$\hat{h}^2$, donors 1-287
D
Method choice vs. sampling noise
GCTA vs HEELS (same donors)
0.999
SuSiE vs itself (independent donors)
0.892
HEELS vs itself (independent donors)
0.855
GCTA vs itself (independent donors)
0.848
SuSiE vs HEELS (same donors)
0.836
GCTA vs SuSiE (same donors)
0.835
Pearson r
Grey bars compare two different estimators on the SAME donors; coloured bars compare one estimator with itself on DIFFERENT donors.
