
Head-to-head on identical simulated phenotypes
A
Per-locus agreement
SuSiE
HEELS
agreement
summary-statistic $\hat{h}^2$
GCTA $\hat{h}^2$ (individual-level benchmark)
B
Bland-Altman vs. GCTA
HEELS mean +0.042
estimator − GCTA
mean of the pair
C
Which estimator is closest
GCTA
SuSiE
HEELS
share of loci
causal SNPs
